Feature updates

Stay updated on Quark Content Enablement product updates, fixes, feature enhancements, and release announcements. You will find the latest release notifications to help you make the most out of your Quark Content Enablement solution on this page. Below are the release notes* for the current quarter.

Digital Publishing

Big Sur Compatibility

New

QuarkXPress is compatible with Big Sur

Mac OS Big Sur support customers will be able to use QuarkXPress on the latest Mac OS. New Mac users (with the new OS pre-installed), technology enthusiasts (who cannot wait to put their hands on the latest OS), and other users who have auto-update set on their mac can now start using QuarkXPress.

Improved

Enhanced Scrolling and Panning on Mac OS

Move spread drawings on CA Layer on Mac OS to experience improved panning and scrolling operation of the QXP layout on Mac OS. This feature is also required for making QuarkXPress compatible with the new Mac OS.

This feature will be available in Page Layout, Graphics & Illustration, Photo Editing, Web Publication, and Mobile App Publication.

High Speed Layout Rendering

Work faster and boost your productivity. Experience layout rendering at never before speeds with new performance improvements to drawing and editing layout objects.

This feature will be available in Page Layout, Graphics & Illustration, Photo Editing, Web Publication, and Mobile App Publication.

Page Layout

New

Mark Open Type Feature Support

Get precise control over glyph placement for sophisticated text layout and rendering in each script and language system that a font supports.

Correct: مکمل Incorrect: مکمل

Complex glyph positioning becomes an issue in writing systems, such as Vietnamese, Urdu, etc. (basically Middle East, Indic, South Asian) that use diacritical and other marks to modify the sound or meaning of characters. These writing systems require controlled placement of all marks in relation to one another for legibility and linguistic accuracy. This feature will provide precise control over glyph placement for sophisticated text layout and rendering in each script and language system that a font supports.

Define Borders With 'Text Shading Style'

Clearly define your shaded text with borders across page-breaks. Now you can make sure your shaded text shows the bottom borderline for the first page and top borderline for the next page if the paragraph breaks.

Defining a border with 'Text Shading Style' does not show the bottom borderline for the first page and the top borderline for the next page if the paragraph breaks onto the next page. This new feature can render these closing border lines in continuous paragraphs breaking onto the following pages.

Graphics and illustrations

New

Define Borders With 'Text Shading Style'

Clearly define your shaded text with borders across page-breaks. Now you can make sure your shaded text shows the bottom borderline for the first page and top borderline for the next page if the paragraph breaks.

Defining a border with 'Text Shading Style' does not show the bottom borderline for the first page and the top borderline for the next page if the paragraph breaks onto the next page. This new feature can render these closing border lines in continuous paragraphs breaking onto the following pages.

Web and Mobile publication

New

Seamlessly Copy/Paste Interactivity

Discover a smarter way to produce interactive content. Copy specific interactivity from one box and apply it to any other box. Now you can enhance the user experience and do it in lesser time.

This feature will be available in QuarkXPress for Business, Web Publishing, and Mobile & App Publishing.

Support for Semantic Headers

Generate SEO-friendly output by quickly applying semantic tags to headers. With support for semantic headers, you can create content that is accessible and integrable with other systems.

This feature will be available in Web Publishing, Mobile App Publishing.

Content Automation

Author

New

Ability to componentize a region

This feature allows Quark Author users to create regions as components. These regions would be used across documents and will enable the user to re-use existing region components. Users of the Author app can edit the regions inline and, for a selected region, perform actions such as changing the region title, saving and updating revisions, adding region-to-workflow, setting a due date, coloring, etc.

Ability to componentize a table

Using this feature, Quark Author users can choose to define a table as a component across different document types. This feature also lets the users componentize the table by selecting the “Create Table component” option and save it as a component and “Search” based on the various table types. Additionally, the referenced table can be edited inline in the document.

Edit referenced table inline

Using this feature, Quark Author users can make necessary changes in the table without opening the table in a separate authoring window. This facility will allow users to do their work faster.

Ability to specify the type of tables

This feature lets Quark Author users associate pre-configured types for tables in canvas (e.g., smart table, rating table, financial table). This new capability will help users set up an effective way of visual classification, publishing hints, and semantic typing of tables in the document.

Automatically track changes by users editing the document

This feature enables Quark Author users to detect workflow status transitions of the smart document. Once the smart document being edited transitions to a defined status in the workflow, the system automatically starts tracking all the future edits.

Workspace

New

Edit properties of multiple assets at once

Users of the Workspace app can now multi-select assets and edit common properties in a single view. This feature will help route multiple assets to a user with ease.

Search for collections

The ability to search for collections has been introduced newly in the Workspace app. All different condition groups such as “and,” “or” are now supported in the context of collections.

Duplicate search

Users of the Workspace app can now create new searches by using existing defined searches as a template.

Copy, move, and duplicate collection with hierarchy and assets

Users of the Workspace app can now copy a collection with/without asset(s). It is executed as a background task, enabling the user to continue working and later check its completion.

Collection view persistence

Users of the Workspace app can now select various column options and set this view for all collections. All the subsequent navigations would honor the column option and view mode settings.

Admin

New

Duplicate users and groups

As an administrator, you need the ability to duplicate users and groups. This productivity enhancement would enable administrators to quickly set up the workflow configuration and configure privileges for users and groups.

Quark XMLAuthor

New

Authoring DITA documents

This feature lets XML Author users create different kinds of DITA documents like map, topic, concept, task, and reference. While authoring such documents, the user can reference re-usable content from the server or create re-usable components from the current document. Users can also see the live preview of the editing done in the document.

Publishing DITA documents

This feature lets XML Author users create different kinds of PDFs using DITA OT Tools. Using this feature, users can do conditional publishing also.

Content Management

New

Advanced search page for enhanced searchability

The system now allows the additional capability for doing advanced searches. These searches can focus on phrases or their absence and are grouped with multiple property-based filter conditions.

Enhanced the search user experience for date properties

The Content Access Portal continues to enhance searching and filtering capabilities. Search properties now additionally have filters for days, months, weeks, quarters, and years. The system further shows custom date ranges for all these filters, which provides a precise way for users to find the documents they wanted.

Added document management from the Content Access Portal

The Content Access Portal now offers document management by allowing documents from specific content sync sources to be hidden or shown within the access portal. Content administrators can tweak the lifecycle of documents. They can choose to hide documents from within the Content Access Portal without removing the documents from the content source. This facility can be handy when working on changes for a document, and they don't want to share it with prospects until those changes are done.

Improved Mobile App user experience by accessing collection in offline mode

The content access mobile apps now allow entire user collections to be made offline. This enhanced flow now allows individual documents and complete user collections to be made available for offline usage. The app honors this preference on the user collection, and in case a user chooses to make a collection offline, the app syncs all documents within the collection on the user's mobile device. The app then ensures that updates to the collection or documents within a collection are reflected.

Improved

Enhanced the user experience to indicate new and updated content

The Content Access Portal user interface now indicates new and updated documents with a visual indicator. Any document added or updated in the last seven days will have this visual indicator. This indicator is available in all search and browse user interfaces. This facility gives the user better findability of documents, especially when looking at non-search views, like favorites, collections, and topics.

Improved the previewing capabilities for Microsoft Excel documents

The Content Access Portal is now enhanced to render improved Microsoft Excel previews. Some improvements are areas where the content did not fit in cells for date and other such formatted columns and cells.

Content aggregation from Google team drive sync source now supports limited user role permissions

The content aggregation flows from team drive sync sources now support limited user role permissions, not requiring elevated permissions. This facility allows the content aggregation to be more compliant with IT securities and policies.

Content aggregation infrastructure improvements

There are multiple content aggregation infrastructure improvements for reliability, stability for all content sync sources.

Sales Enablement

New

Content score for sellers

The content access portal can now send out monthly content scores to sellers based on all activity they performed last month. This email is directly sent to their inboxes, with the summary and consolidated score.

Note: This feature is in Beta, and the content score methodology is under review.

Improved Content Hub user experience when prospects view content shared

The new user interface is consistent with the modern user interface theme of the application. It improves the prospects' collection viewing experience, shows additional metadata for the seller, the properties of the collection, and has a much better Content Hub kiosk-like experience. This user experience is customization friendly; any HTML markup can also be applied, leading to a pleasant and rich viewing experience.

Improved

Improved the presenter user experience

The Content Access Portal now has an improved user for sellers when they are viewing documents. Its modern, intuitive, has additional capabilities like page views, document thumbnails, mobile support, and many more, while it retains older functionality and capabilities like settings, live sharing.

Marketing Enablement

New

Improved Content Hub user experience when leads view content shared

The new user interface is consistent with the modern user interface theme of the application. It improves the prospects' collection viewing experience, shows additional metadata for the seller, the properties of the collection, and has a much better Content Hub kiosk-like experience. This user experience is customization friendly; any HTML markup can also be applied, leading to a pleasant and rich viewing experience.

Improved

Improved content personalization capabilities in the clipboard export functionality

The content access portal now allows users to export documents created using the clipboard functionality in Microsoft PowerPoint or PDF formats. This feature will enable sellers to have content personalization and re-use capabilities from existing documents based on their user permissions.

Improved the user interface for the screen where a prospect enters their email address

The new user interface is consistent with the modern user interface theme of the application. It also shows the user metadata, especially when collections are shared, like the user and the number of files in the collection.
